

Waleed Ahmad

Software Engineering Student

Profile

Software engineering student with hands-on industry experience developing reliable software solutions in professional environment. Contributed to production systems at DevEire using Java, Node.js, JavaScript and Brightspot CMS with experience across development, debugging, QA testing and agile workflows. At the Rapid Innovation Unit, developed healthcare software prototypes including digital communication and clinical workflow applications. Strong interest in full-stack development, cybersecurity, and building user focused solutions through effective problem solving and software engineering practices.

Professional Experience

Software Engineering Intern at Rapid Innovation Unit, Limerick

June 2026 — September 2026

- Developed digital healthcare solutions with hospital staff to improve clinical workflows and patient communication
- Designed a customizable Digital Communication Board for bedside patients to help non-technical staff to manage patient specific details at a glance
- Developed GyneSurgery Connect project, a role-based patient pre-assessment platform for clinical teams to manage patients more efficiently as compared to paper based system.

Software Engineering Intern at DevEire, Limerick

June 2025 — December 2025

- Contributed to the development and maintenance of two production websites using Brightspot CMS, Java, and JavaScript.
- Participated in the end-to-end software development lifecycle, from design and implementation through testing and deployment.
- Debugged website issues and supported Stripe payment workflow validation and troubleshooting.
- Performed QA testing, created test cases in Jira, and collaborated using GitHub within an Agile development workflow.

Education

Bachelor of Science in Immersive Software Engineering, University of Limerick, Ireland

September 2024 — August 2027

Relevant Modules: Context of Code, Human-Computer Interaction, Data Structures, Object-Oriented Programming, Software Testing

Current QCA: 3.30

Details

Limerick V9421K7, Ireland,
0899826148

Areas of Expertise

▣ Recent Projects

SecureMsg

C++ | Cryptography |
Blockchain | Cybersecurity

- Developed SecureMsg, a secure messaging application in C++ using cryptographic Techniques to protect message confidentiality and integrity
- Applied blockchain based verification and cybersecurity principles including vulnerability analysis and ethical hacking for authentication and tamper resistance.

Device Metrics & System Monitoring Platform

January 2026 — March 2026

- Built a Python-based platform for collecting and processing device metrics from multiple data sources.
- Developed FastAPI REST APIs for retrieving current and historical monitoring data.
- Stored timestamped metrics in an Azure SQL Database for reporting and analysis.
- Deployed the system on a cloud VM server to support hosted access and end-to-end operation.

▣ Achievements

HULT Prize Nationals Final, Dublin

March 2025 — April 2025

- Selected as 1 of 16 teams globally from 15,000+ entries in the Hult Prize social entrepreneurship challenge.
- Proposed a diabetes-management solution using a single biosensor patch connected to a mobile app for real-time health monitoring.
